Same discrete gradient, checked against native AD

9 shots · 2500 steps · 50 checkpoints · repeat 0 · AD/Hybrid: shared symlog scale · difference: linear scale

At smoothed initial model; true-model target. AD/Hybrid: shared symlog, 0.5% display saturation, no smoothing.
Colorbars: objective derivative per SI parameter unit; linear core = 0.001 × limit. Difference: dimensionless, no clipping.
